

Design Services.

Custom Designs Unite Form and Function from Xybix's In-House Professional Design Team.

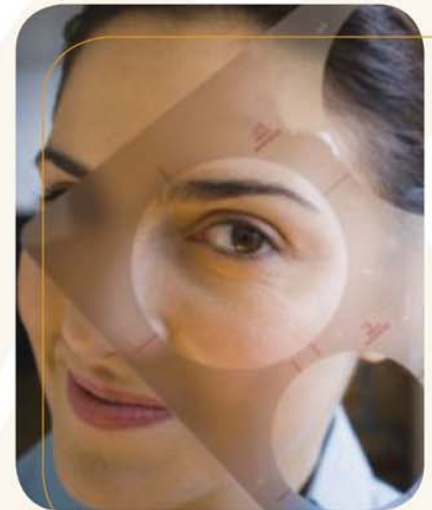

Xybix delivers customized solutions by first listening then interpreting each customer's unique requirements into a fully-designed working environment.

Our experienced team of professionals goes to work creating the optimal ergonomics within the most functional environment, combined with aesthetics that complement and enhance your facility.

Key Concepts / Benefits

Benefits

- Complete design service based on industry best practices and standards
- Comprehensive planning process from information gathering through renderings and complete, to-scale CAD outputs
- Designed based on space, equipment and ergonomic requirements for optimal traffic flow, space utilization and individual performance
- Consultative one-on-one process with degreed design professionals

With an eye for ergonomic design that is functional and stylish, our experienced design team delivers amazing solutions to any center.

Differentiators

The Xybix Difference

- Fully-customized consultative approach to every system
- “Whole Room” design concept delivers thorough solution that meets all requirements
- Internal, degreed design and project management professionals provide an end-to-end design, manufacture, install, and service solutions
- Design aesthetics complement facility finishes
- Xybix designers have extensive experience teaming with our customers’ designers, architects and managers to achieve a collaborative final design

Our designers comfortably collaborate with your team, including management, other design firms, and architects to ensure the most completely thought out solution is achieved.

We go to work creating options and solutions for you based on our highly configurable and customizable ergonomic furniture system.

Our beautiful 3D renderings bring the design to life with accuracy and detail so you can decide exactly how your center will look and function.

Features/Components

The Design Process

- Initial client meeting with the Xybix account manager to define overall goals
- Gather list of technology and space requirements for each individual station including building codes and ADA requirements compliance.
- Initial space planning and station design concepts for whole room and individual stations
- One-on-one formal presentations to clients
- Refinement and finalization of finish materials
- Client approval and transition to Xybix manufacturing team and process
- As built drawings to reflect jobsite changes
