

A monitor arch built for the future technology expansion of the Comm Center.

Adding monitors, large screens or a second row of monitors is now supported with the strength of aluminum and the durability you'd expect.

Rollervision Focal Depth Monitor Adjustment Platform

Xybix's patented Rollervision® has gone through an update.

In 2017 Xybix's Rollervision now includes better engineering, a cleaner look and feel as well as a patent update. Xybix's monitor focal depth adjustment platform has been strengthened and we've added more stability then ever before.

- Double thick aluminum extrusion for a more stable platform
- Second height row of monitors without crossbar (cleaner look)
- Bigger better cable management
- Holds curved monitors with ease
- Can fit up to a 52" screen with full focal depth adjustment
- Never sags, or needs re-adjustment
