

AXYS Security Information

General AXYS Security Information

The AXYS system is controlled through the AXYS App. The AXYS System can be controlled via Windows and/ or Android or IOS.

The Windows app can be downloaded onto any Windows 10/11 computer and is connected to the AXYS system via a USB cable.

Any mobile device can be connected via Bluetooth using either the Android or IOS app for the respective device.

Each AXYS system has the ability for one computer to be connected through a USB cable and one mobile device connected through Bluetooth at the same time.

The AXYS app and AXYS system do NOT have access to other files or programs on connected devices. Connected devices can only send and receive input to and from the AXYS system via the AXYS App. Connected devices do NOT have the ability to communicate with other connected devices through the AXYS App or AXYS system.

Downloading The AXYS App for Windows and Internet Usage

The computer must have access to the internet and the Microsoft Store to download the Windows App version of AXYS from the Xybix website. If the computer utilizing the AXYS App does not have access to the internet, the setup software will need to be downloaded on a separate web enabled computer and copied over.

Once installed, the AXYS software will NOT connect to or utilize the internet in any way.

Bluetooth Functionality for Mobile Apps, Disabling Bluetooth

All AXYS systems will have Bluetooth capabilities enabled by default. This will allow mobile devices to connect to the AXYS system through the AXYS App on Android or IOS. The AXYS system will only allow one device to be connected via Bluetooth at a time. To connect different devices via Bluetooth, the previous mobile device must be disconnected from the AXYS system before the new device can be connected.

The Bluetooth feature can be disabled to allow AXYS to only be controlled via USB connection to a Windows computer. With the Bluetooth feature disabled, the AXYS system will no longer broadcast a Bluetooth signal and no devices will be able to access the AXYS box via Bluetooth. The Bluetooth feature can only be reenabled through a computer with the Windows version of the AXYS App.
